

How to use these barcodes

1. In the dashboard, click 'Load sample orders' on the Get set up card.
2. Print this file at 100% scale. You can also scan straight off a screen.
3. On a linked phone, sign in and tap 'Scan pick sheet'. Scan an ORDER label (pages 6-6) to open that order, e.g. SAMPLE-1001. The order-number barcode opens the order directly.
4. Tap Scan and scan PRODUCT labels (pages 2-5). Each order's items are listed on the phone; find the matching labels by name, SKU or bin. Scan one label several times for quantity > 1.
5. Scan a DECOY label (end of page 5) to see the red WRONG ITEM screen.
6. Scan a product that isn't on the open order: also WRONG ITEM. Scan one too many times: ALREADY HAVE ENOUGH.

What's inside

Pages 2-5: 28 product labels (UPC-A), sorted by bin location, plus 3 decoys.

Pages 6-6: 12 order-number labels (Code 128), SAMPLE-1001 to SAMPLE-1012.

All 12 orders use only these 28 products, so these labels cover every pick.

Tips

Hold the phone 10-20 cm away; tilt slightly if there's glare.

Cut the product labels out and tape them to bins/boxes for a realistic walk-through.

A USB or Bluetooth scanner works too: the phone app accepts it as keyboard input.
